WORK AUTHORIZATION

Candidate requires employer visa sponsorship for legal employment in the European Union. Open to discuss timing, relocation, and process.

PROFESSIONAL SUMMARY

Senior SAP ABAP developer with more than seven years of experience, specializing in SAP ERP 6.0 (EHP7/EHP8). Expert in evolving performance-critical enterprise solutions in FI, MM, SD, and PM. Core strengths include refactoring legacy Z-landscapes, SQL and database access optimization, scalable integration design (IDoc, RFC, BAPI), and clean ABAP Objects architecture. Strong focus on Clean ABAP, HANA-ready development, and Cloud-first integration patterns.

Consistently improves measurable outcomes: faster reports and transactions, reduced maintenance cost, shorter onboarding for developers, and stable delivery under high concurrent load. Combines hands-on development with technical ownership, code review, and mentoring. Outside SAP delivery projects, uses Python (Automation & Scripting) for personal tooling and small automation tasks.

TECHNICAL SKILLS

Core

- ABAP and ABAP Objects; Modern ABAP Syntax (7.40+); performance analysis and SQL tuning
- SAP modules: FI, MM, SD, PM
- Integrations: IDoc, RFC, BAPI; ALV reporting
- Data modeling, indexing strategy, application server-side optimization

Tools and delivery

- SAP GUI including Object Navigator (SE80); ABAP Development Tools (Eclipse ADT)
- SAP Solution Manager; Agile/Scrum in distributed international teams
- Git for personal projects and ad hoc collaboration outside the SAP production toolchain
- Python (Automation & Scripting) outside SAP delivery projects

SELECTED PROJECT HIGHLIGHTS

- FI Z-landscape modernization (Power Machines): unified 20+ FI Z-programs; 30–60% faster key reports and transactions through SQL optimization and removal of redundant logic.
- High-load optimization: redesigned access patterns and indexing; heavy queries from seconds to sub-second with 1000+ concurrent users.
- Retail integrations (Stroitelyi Dvor): SAP retail with RFC/IDoc to external systems, including external legacy systems; automated product master data and MM/SD enhancements.
- Contract approval and reporting (Sibintek / Rosneft ecosystem): OOP contract-approval platform; 10+ reports; stable rollout and sustained post-go-live performance.

PROFESSIONAL EXPERIENCE

Senior SAP ABAP Developer (SAP ERP 6.0 EHP 7)

Power Machines PJSC, Russia · November 2021 – Present

- Refactored and unified core FI Z-program landscape (20+ programs), reducing execution time of key reports and transactions by 30–60% through SQL optimization and elimination of redundant logic.
- Redesigned database access patterns and indexing strategy, cutting high-load query response times from seconds to sub-second range under 1000+ concurrent users.
- Standardized development approach across ABAP Objects codebase, reducing onboarding time for new developers by approximately 40%.
- Delivered continuous enhancements to custom FI solutions, supporting evolving business requirements without regression in performance.
- Served as technical authority on SAP customization feasibility, improving solution design upfront and reducing mis-scoped work and rework in the support organization.
- Mentored junior developers and interns; improved code quality and reduced defect rate in delivered features.
- Led architectural decisions on table design, keys and indexes, and application server logic optimization.

SAP ABAP Developer

Stroitelyi Dvor PJSC, Russia · September 2020 – October 2021

- Developed and maintained SAP-based retail solutions integrating with external systems, including external legacy systems, via RFC and IDoc.
- Automated product master data workflows, reducing manual effort and accelerating item onboarding.
- Delivered MM/SD enhancements improving data consistency and reducing user-side errors.
- Implemented stable SAP-to-external data exchange with minimal manual intervention.

SAP ABAP Developer

Sibintek (Rosneft IT integrator), Russia · November 2018 – September 2020

- Developed enterprise ABAP solutions for the Rosneft ecosystem in FI and contract-approval contexts.
- Extended a custom OOP contract-approval system; delivered 10+ analytical and operational reports for business users.
- Supported rollout and post-go-live stability and performance of the reporting layer.
- Improved reporting usability and performance to support faster contract-management decisions.

EDUCATION

Bachelor's degree — Volgograd State Technical University, Volgograd, Russia

Field: Computer Software and Automated Systems

LANGUAGES AND OTHER

- English — professional; Russian — native. Spanish — learning (A1+); continuing study.
- Code review experience; mentoring of developers and interns.
- Open to relocation to the EU (Spain preferred) and to growing professional Spanish.
